Instructions for Patients and their Families / Caregivers regarding Herceptin® treatment

1. Herceptin® treatments are scheduled every three weeks.
Your first Herceptin® infusion will be given over 90 minutes, the second infusion over 60 minutes and each subsequent infusion would take 30 minutes. Treatments are coordinated with your referring oncologist.
2. It is important that your heart function is measured prior to starting Herceptin® and every time you have completed a series of 4 treatments. These tests will be coordinated through your oncologist. For treatment with Herceptin® Muga Scans are done on a regular basis as a small number of patients can develop weakness of the heart muscle.

Please don't hesitate to contact us if you have any further questions. We would like to make this treatment as easy as possible for you.
Thank you for your cooperation.
